

CUSTOM E-LEARNING DEVELOPMENT

eLearning your people actually finish

We turn your expertise into custom eLearning that helps people build a skill and use it afterwards. Tailored to your goals, and built with the authoring tool the project needs.

1,100+

Courses delivered

250+

Satisfied clients

35+

Languages localized

Based on internal project records.

Capabilities that follow the problem

Most projects use two or three of these together. Tool choice is decided by the brief — if a cheaper one does the job, we say so before you sign.

Custom eLearning

Courses built from your material, your systems and your learners — scoped to what people should be able to do, not seat time.

Storyline 360

Rise 360

Captivate

Storyline development

Branching scenarios, custom interactions and variable-driven logic, documented so the file stays maintainable after handover.

Branching

JavaScript

xAPI

Rise development

Responsive, fast-to-publish courses that stay easy to update — by us or by your team.

Responsive

SCORM 1.2

LMS integration

Launch, completion, scoring and bookmarking verified on the LMS you already own, with a written test report.

SCORM 2004

xAPI

cmi5

Localization

One course, every market — layouts that survive 30% text expansion, RTL, and audio that is re-recorded rather than subtitled over.

XLIFF

35+ languages

AI avatar video

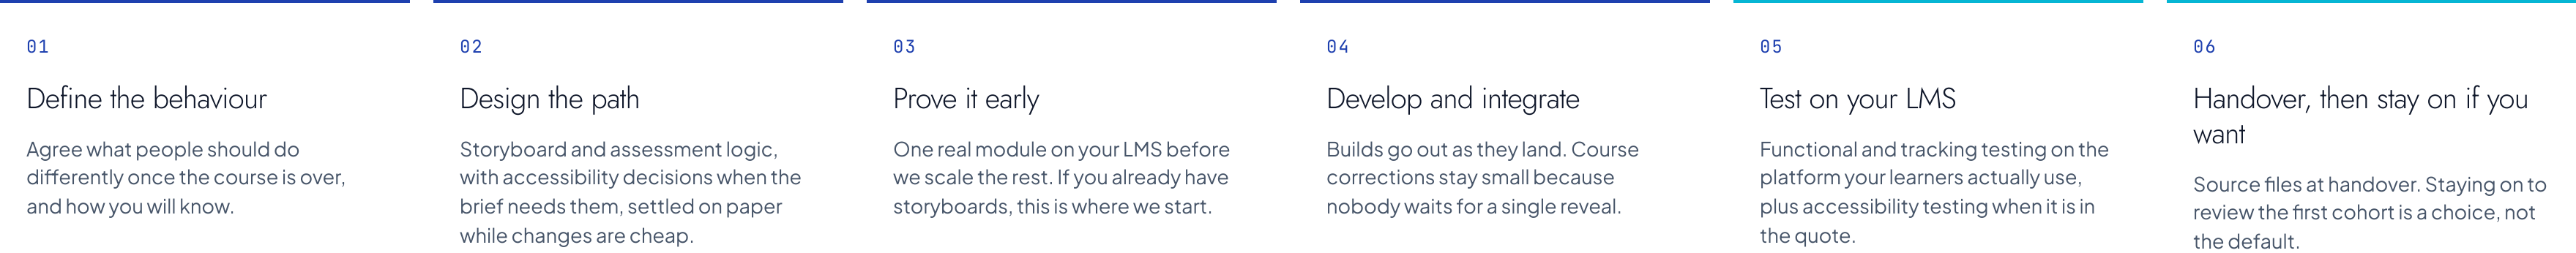

Presenter-led video without a studio. Script changes re-render in minutes, with a human directing the delivery.

HeyGen

Synthesia

Six phases, then round again

How long each phase takes depends on the scope. If you already have storyboards and only need the build, we start at Prove it early.

Built for delivery on your LMS

A completion report is not evidence of competence. Tracking and ownership are decided at storyboard. Accessibility is quoted when the brief needs it, then checked on the platform you already run.

Tracking that works

SCORM 1.2, SCORM 2004, xAPI and cmi5. The statement set is agreed before build, not retrofitted when reporting fails.

Accessible when the brief needs it

WCAG 2.2 AA is quoted as its own line and planned at design stage: keyboard paths, screen-reader semantics, captions and contrast. Section 508 documentation on request.

Source files are yours

Project files and documentation transfer at close. Keep us on to maintain the course, take it in-house, or take it elsewhere — nothing is held back as leverage.

Tested on your platform

Launch, completion, scores, bookmarking and suspend data verified on the LMS and version your learners use, with a written report.

Who you will actually be working with

The people who scope the project are the people who build it. No account layer between you and the work.
